
ABSTRACT	3
CHAPTER I	5
Introduction and objectives of the research	
CHAPTER II	25
Influence of fungal strain, temperature, and wetness duration on infection of grapevine inflorescences and young berry clusters by <i>Botrytis cinerea</i>	
CHAPTER III	45
Environmental conditions affect <i>Botrytis cinerea</i> infection of mature grape berries more than the strain or transposon genotype	
CHAPTER IV	66
Effect of water activity, relative humidity and grape berry composition on conidia germination and colony growth of <i>Botrytis cinerea</i> strains	
CHAPTER V	83
Environmental effects on the production of <i>Botrytis cinerea</i> conidia on different media, grape bunch trash, and mature berries	
CHAPTER VI	102
A mechanistic model for main infection pathways of <i>Botrytis cinerea</i> in grapevine, driven by weather conditions and vine growth stages	
CHAPTER VII	127
General discussion
