

Contents

CHAPTER 1	5
Modelling and decision support systems in mycotoxin management in cereals, a general introduction	
CHAPTER 2	27
Type A and B trichothecenes and zearalenone in Italian wheat grown in different meteorological and agronomic conditions	
CHAPTER 3	49
Cross-validation of predictive models for deoxinivalenol in wheat	
CHAPTER 4	67
Risk of mycotoxin contamination in maize in North Italy weather and cropping system role	
CHAPTER 5	77
Comparison of temperature and moisture requirements for sporulation of <i>Aspergillus flavus</i> sclerotia on natural and artificial substrates	
CHAPTER 6	95
AFLA-maize, a predictive model for <i>Aspergillus flavus</i> infection and aflatoxin B ₁ contamination in maize	
CHAPTER 7	121
Fumonisin contamination in maize, a predictive approach as support for farmers to reduce human exposure	
CHAPTER 8	144
Application of predictive model worldwide: the MycoRed experience	
Final remarks and futures	157
Summary	161
Acknowledgments	163
Paper published during the PhD period	165
